

Welcome to WakeMed Physician Practices(WPP) Maternal Fetal Medicine.

Maternal Fetal Medicine (MFM) is a specialty of Obstetrics and Gynecology (Ob-Gyn). We are a team of physicians, genetic counselors, sonographers and nurses. Our main goal is to provide excellent care to you and your pregnancy.

Our ultrasound unit is accredited by the American Institute in Ultrasound Medicine in high-risk obstetric ultrasound and fetal echocardiography. All physicians and genetic counselors are board certified. When you come for an appointment, you may have an ultrasound, a visit with one of our genetic counselors, and/or a visit with one of our MFM Physicians. The average length of an appointment in our office is one hour.

If you have an ultrasound, a certified sonographer will perform the ultrasound. Then the ultrasound pictures will be reviewed by one of our MFM Physicians. We will give you some pictures of the baby to take home. Please understand that the pictures are affected by how the baby is positioned, features of each patient as well as other factors. We do not allow recording or live-streaming of the ultrasound.

We encourage you to bring a support person(s) to the appointment. But, if children come to the appointment, we ask that you bring another adult to take care of the children so we can focus on you and your pregnancy.

We make every effort to provide quality and timely services. However, unexpected things can arise during pregnancy that put our staff behind schedule. Please be patient with us. We will make sure to spend as much time with you as needed.

Thank you for involving us in your care. Please let us know if you have any questions or concerns.
